

EPA to investigate Wingfield blaze

JAMES HETHERINGTON

A FIRE at Wingfield Dump is now under control, however the Environmental Protection Authority is demanding answers over the sixth fire in just three years.

The EPA yesterday confirmed an inquiry would be undertaken to determine if dump operator Adelaide Resource Recovery could be to blame.

EPA chief executive Tony Circelli said the organisation would take more action than just an inquiry.

"We will be investigating to make sure they weren't breaching any of their environmental duties and we'll also be issuing an environmental protection order on the company to ensure they make good on the site and remove the burnt material," he said.

Calls have been made for the EPA to be given more

INQUIRY: The cause of the Wingfield fire is unknown.

power to prevent further fires at the Wingfield site.

"We have been talking with the industry and Government about potential reforms that can strengthen our ability to ensure the movement of material is more thorough on all sites throughout South Australia," he said.

The cause of the fire is still unknown, however Adelaide Resource Recovery will face penalties if found to have ignored standards set after the 2013/14 fires.

Vandals create a stink

GRAFFITI vandals are being caught in the act thanks to a new vapour-sensing system installed on Sydney trains.

The NSW government is running a trial of the Mouse-trap device, an electronic chemical sensor that detects the smell of spray paint or

More than 30 offenders have been arrested so far.

"Its success has been in allowing Sydney trains to move from a strategy of removing graffiti to one where we stop it as it happens," Sydney Trains boss Howard Collins said.

The government spent \$34
